
translation
translational initiation
nuclear−transcribed mRNA catabolic process, nonsense−mediated decay
cytoplasmic translation
regulation of transcription by RNA polymerase II
mitochondrial translational termination
mRNA cis splicing, via spliceosome
transcription by RNA polymerase II
mRNA splicing, via spliceosome
proteasomal ubiquitin−independent protein catabolic process
mitochondrial translational elongation
negative regulation of mRNA splicing, via spliceosome
ubiquitin−dependent protein catabolic process
regulation of alternative mRNA splicing, via spliceosome
transcription elongation by RNA polymerase II promoter
proteasomal protein catabolic process
mitochondrial translation
regulation of mRNA stability
RNA splicing
mRNA processing
positive regulation of transcription by RNA polymerase II
translational elongation
positive regulation of proteasomal ubiquitin−dependent protein catabolic process
anaphase−promoting complex−dependent catabolic process
peptidyl−threonine dephosphorylation
mRNA 3'−end processing
positive regulation of transcription elongation by RNA polymerase II
formation of cytoplasmic translation initiation complex
protein deubiquitination
positive regulation of translation
mRNA polyadenylation
termination of RNA polymerase II transcription
intracellular protein transport
SRP−dependent cotranslational protein targeting to membrane
mRNA export from nucleus
protein import into mitochondrial matrix
clathrin−dependent endocytosis
RNA export from nucleus
positive regulation of protein import into nucleus
mRNA transport
vesicle−mediated transport
protein targeting to membrane
endosome transport via multivesicular body sorting pathway
retrograde vesicle−mediated transport, Golgi to endoplasmic reticulum
retrograde transport, endosome to Golgi
protein transport
vacuolar transport
mitochondrial respiratory chain complex I assembly
rRNA processing
chromatin organization
maturation of SSU−rRNA from tricistronic rRNA transcript (SSU−rRNA, 5.8S rRNA, LSU−rRNA)
chromatin remodeling
clathrin−coat assembly
Arp2/3 complex−mediated actin nucleation
ribosomal large subunit assembly
membrane organization
barbed−end actin filament capping
maturation of LSU−rRNA from tricistronic rRNA transcript (SSU−rRNA, 5.8S rRNA, LSU−rRNA)
cell redox homeostasis
protein stabilization
negative regulation of DNA−templated transcription
negative regulation of transcription by RNA polymerase II
negative regulation of apoptotic process
negative regulation of intrinsic apoptotic signaling pathway
positive regulation of canonical Wnt signaling pathway
positive regulation of substrate adhesion−dependent cell spreading
negative regulation of phosphatase activity
ATP metabolic process
regulation of cellular amino acid metabolic process
nucleoside triphosphate biosynthetic process
proton motive force−driven mitochondrial ATP synthesis
D−xylose metabolic process
proton motive force−driven ATP synthesis
mitotic cell cycle
negative regulation of G2/M transition of mitotic cell cycle
regulation of mitotic cell cycle phase transition
exit from mitosis
regulation of cytokinesis
macroautophagy
autophagosome assembly
electron transport, NADH to ubiquinone
tricarboxylic acid cycle
autophagosome maturation
ubiquitin−dependent ERAD pathway
response to insulin stimulus
response to endoplasmic reticulum stress
microtubule cytoskeleton organization
intraciliary transport
microtubule−based movement
axoneme assembly
protein folding
protein refolding
negative regulation of protein binding
